

## **Cirtex Corp. Launches ‘HostV’, Offers VDS, Dedicated Servers**

**NEW YORK (January 28, 2008)** – Cirtex Corp, a hosting provider serving clients since 2003, announced today it has launched HostV (<http://www.hostv.com>), a new brand offering Virtual Dedicated Server and Dedicated Server hosting solutions. The company also operates two other distinctive shared hosting brands—CirtexHosting and MySitesOnline.

Through HostV, the company will offer Dedicated and VDS hosting services designed to meet the needs of small to medium sized businesses and Web developers. Namely, all plans come pre-loaded with robust security features, and VDS plans offer a large assortment of developer tools, including FFMpeg and both PHP4 and PHP5.

“Businesses require hosting solutions that not only meet their present needs, but also that foster opportunities for growth and development in the future,” said Cirtex Corp. president John Xie. “Through unique features, services, and tools, we designed HostV to offer the capacity businesses need to take their Internet solutions to the next level, while still remaining affordable and viable.”

As part of HostV’s launch, the company is offering a one-time promotion, redeemable for 50% off of the first month or first year of payment. Details of the promotion are available on the HostV Web site.

All VDS plans are powered by servers featuring Intel quad core processors with HyperThreading technology. The servers run Centos Linux and utilize SWsoft’s Virtuozzo for account management and partitioning.

HostV’s network operates out of two datacenters in the United States, located in New Jersey and Chicago. Both facilities provide redundancy and business-class routers and switches. All systems are monitored 24/7 by a Network Operations Center (NOC) and on-site security staff.
