

Summary: CirtexHosting has upgraded tools for developers and added capabilities for its servers to record, convert and stream digital video.

CirtexHosting Upgrades Developer Tools, Adds Video Capabilities

NEW YORK (11/20/2006)—CirtexHosting (<http://www.cirtexhosting.com>), a leading provider of shared and reseller Multiple Domain web hosting, announced today it has upgraded tools for developers and has added capabilities for its servers to record, convert and stream digital audio and video.

The company now offers both PHP4 and PHP5, as well as IonCube Loader and Zend Optimizer II. The additions feature greater XML support as well as more robust SQL related tools, including SQLite and MySQLi.

FFMPEG and FFMPEG-PHP, each Linux-based software packages that allow for the manipulation and streaming of digital video, have also been added.

“These changes will offer our customers additional capabilities in developing their web sites, especially those dealing with multimedia content,” said John Xie, CirtexHosting President. “In an increasingly Web 2.0 environment, it is important we continue to offer the latest technologies.”

The new additions have been deployed to all CirtexHosting servers, and are available at no additional charge.

CirtexHosting shared web hosting starts at \$2.50/monthly and includes a swath of developer tools, including Perl, CGI, Curl, GD2 & NetPBM, and ImageMagick.

“We have always gone the extra mile for our developers, and it’s a decision that has really paid off,” said Xie.
