

## **HostV Deploys Ksplice Rebootless Solution to Boost Server Uptime**

**NEW YORK (March 16, 2010)** – [HostV](#), a leader in managed Virtual Private Servers and Dedicated servers, announced today it has completed deployment of Ksplice Uptrack, a subscription service that enables server administrators to apply important Linux kernel security updates without rebooting the server.

Previously, HostV was required to reboot servers after applying Kernel updates, which are necessary for maintaining server security and stability. Although this downtime was minimal and most customers were not impacted by it, it nevertheless provided brief windows during which the server was unavailable.

With Ksplice Uptrack, new Linux kernel updates are automatically converted into rebootless update packages. HostV can simply apply the update remotely without causing a disruption or significant performance hit on the server.

“As a company, we continue to strive to boost the reliability and capability of our services. Although we cannot control every possible variable, we constantly look for new ways to minimize downtime and prevent potential disruptions. Ksplice Uptrack has a proven record of reliability and provides an instantaneous boost in uptime. It’s a big win for our company and our clients,” said John Xie, president of Cirtex Corp., HostV parent company.

"We're delighted to work with HostV," said Waseem Daher, chief operating officer, Ksplice Inc. "By adopting Ksplice Uptrack, HostV is in a better position to raise the bar and deliver even greater reliability to its customers."

[VPS Hosting](#) from HostV starts at \$39.99/monthly for 50GB of disk space and 1000GB of top-tier data transfer. All accounts include full support for video hosting, free data backups, and HostV’s premium customer support.

Starting at just \$149.99 per month for 300GB of RAID-10 protected disk space and 5000GB of monthly data transfer, HostV’s [Hybrid Servers](#) include 24/7 premium technical support and access to data backup space that offers a full mirror of each plan’s disk space allotment. All Hybrid Servers are based on Linux and offer pre-installed server management software, including Parallels Virtuozzo Power Panel, cPanel and Fantastico. Clients also receive SSH root access to their servers.
