

Summary: CirtexHosting announced today it has implemented Video Sharing Hosting on all hosting accounts. The functionality has been added amid a surge in demand for the ability to share more multimedia content on the Web.

FOR IMMEDIATE RELEASE

CirtexHosting Introduces Online Video Sharing Hosting Amid Surge in Demand

NEW YORK (April 6, 2007)—CirtexHosting (<http://www.cirtexhosting.com>), a leading provider of shared and reseller multiple domain Web hosting, today introduced Online Video Sharing Hosting, amid a surge in demand for the tools and resources required for end-users to distribute multimedia content on the Web.

The new hosting functionality has been added to all plans, and constitutes the implementation of a wide array of features. Notably, the company now guarantees compatibility with leading video sharing portal scripts, including Clipshare, Attachmax, Rayzz and AlstraSoft Video Share. CirtexHosting has also added important software components to enable advanced server-side multimedia processing, including FFmpeg-PHP, Mplayer and Mencoder, flv2tool and GD Library, Libogg and Libvorbis, and LAME MP3 Encoder.

“The demand for Web hosting that can support the rigorous requirements of online video sharing has increased significantly over the past several years, especially as we have seen the proliferation of video portal sites such as YouTube and Google Video,” said John Xie, CirtexHosting President. “We will work to assure, as we have in the past with other emerging trends, that our company can fulfill this important opening in the market and that we can deliver solutions that empower our clients.”

Video Sharing Hosting capabilities have been added to all hosting accounts at no additional charge to customers, but users will be required to purchase the necessary software licenses to use the service. Users seeking to take advantage of high volume video sharing may also upgrade to a more advanced hosting plan with higher resource usage capacities.
