

Summary: CirtexHosting today deployed several major service upgrades and launched a new company website, marking a major milestone and shift in strategy for the six-year old company. New services introduced today include Unmetered Bandwidth Hosting and Semi-Dedicated hosting.

FOR IMMEDIATE RELEASE

CirtexHosting Deploys Major Service Structure Upgrades, Launches New Website

Today's strategic shift includes addition of unmetered bandwidth and semi-dedicated hosting solutions

NEW YORK, May 19, 2009 – CirtexHosting (<http://www.cirtexhosting.com>), a leader in Linux Web hosting, today deployed several major service upgrades and launched a new company website, marking a key milestone and shift in strategy for the six-year old company.

Beginning today, CirtexHosting will offer [Unmetered Bandwidth hosting](#) plans and Semi-Dedicated hosting plans, available alongside existing Shared hosting and Reseller hosting plans. With Unmetered Bandwidth Hosting, customers can host bandwidth-intensive applications and stream multimedia without worrying about exceeding arbitrary caps or facing crippling overage fees. Unmetered Bandwidth hosting plans start at just \$15.99 per month and include the exclusive, award-winning Video Scripts Hosting feature.

CirtexHosting will now also offer Semi-Dedicated hosting, built to accommodate customers hosting CPU-intensive websites or web applications. Starting at \$35.99 per month, Semi-Dedicated accounts are housed on powerful, less-crowded servers that can deliver the level of system resources needed to sustain optimal performance for each individual account. Unlike Virtual Private Servers, Semi-Dedicated hosting plans do not require customers to have detailed knowledge of the server environment and offer a more user-friendly administration interface.

“It is important to sustain an operating and service structure that not only meets the needs of our customers, but also is adaptive to changes in the marketplace. By introducing Unmetered Bandwidth and Semi-Dedicated hosting services, we will be in a better position to serve our customers, especially those hosting rich media and high-bandwidth applications,” said CirtexHosting President John Xie. “Today’s new service additions also plot a clearer path of scalability for our existing Shared hosting customers.”

The company today also launched a new web presence, the third time it has done so in its history. CirtexHosting spent six months preparing, developing, and implementing the new website changes, which include enhanced aesthetics, faster-loading pages, streamlined navigation, and greater brand consistency. Major changes have been made throughout the entire CirtexHosting web presence, including in the live chat system, billing interface, community forums, and the customer helpdesk.
