

CirtexHosting Upgrades Plan Structure, Adds Linux ASP Support

NEW YORK -- CirtexHosting (<http://www.cirtexhosting.com>), a leading provider of shared and reseller Multiple Domain Linux Web hosting solutions, announced today it has introduced a new plan structure. The changes are designed to allow the company to serve a wider variety of customers and sustain a higher level of service.

With the new structure, entry-level shared plans now start at \$2.99/monthly when prepaid for 24 months. CirtexHosting's Professional plan, which includes 30,000MB of disk space and 1,500 of monthly data transfer, now starts at \$12.99/monthly. All plans include unlimited email, domain and FTP features.

"Our new pricing structure reflects our continued efforts to further develop our core capabilities, including technical support and network performance. By structuring our services in configurations that best suit the unique needs of our small business customers, many of whom are developers, we hope to in turn provide an overall more targeted hosting experience," said CirtexHosting President John Xie. "Our end goal is to provide the best service we can, and ultimately differentiate our company in a very competitive market."

Existing customers will not automatically be upgraded to the new pricing structure, but can choose to do so.

In addition to the new plan structure, CirtexHosting also announced it has introduced support for ASP applications on its Linux servers. With the new ASP support, which is available at no additional charge on all plans, developers can easily integrate their applications with Microsoft's .NET Framework for Web services.

CirtexHosting will also support Subversion, an open source version control system. With Subversion, developers can more easily keep track of changes to software projects. Subversion is available to all customers at no additional charge.
