

CirtexHosting Releases Exclusive Custom Colortex™ User Interface for cPanel

NEW YORK, August 7, 2009 – [CirtexHosting](#), a leader in Linux Web hosting, today released its exclusive custom user interface for cPanel®, Colortex™. The interface skin provides an intuitive, color-based navigation scheme that enables CirtexHosting customers to easily manage their sites and take advantage of advanced hosting management features.

Built to mimic the spirit of the coloring in the New York City subway system, [Colortex](#) features nine distinct color-categories, including “Databases,” “Domains,” “Files,” and “Mail.” CirtexHosting customers are able to quickly locate the appropriate section within the interface by identifying the color. For example, all functionality relating to e-mail configuration is bounded in dark green.

Colortex carries through native cPanel interface features, including the ability to drag-and-drop categories, quickly access vital hosting account statistics, and the ability to instantly hide graphics and reset viewing settings. Customizations in Colortex also enable CirtexHosting to better connect with its customers, and the interface includes a live Twitter feed for server updates, company news, and important announcements. Customers can even use Colortex to quickly pay invoices, access customer support, and search for knowledgebase articles.

“Colortex was developed in-house to provide our customers with a distinctive and more engaging user experience. Although we have been using cPanel successfully for more than six years, we see this as an opportunity to further enhance the user experience and push the interface to its limits. Colortex marks the beginning a strategic initiative to make CirtexHosting a leader in many new areas, building upon our core competency of customer service,” said CirtexHosting President John Xie.

Colortex is automatically available to all CirtexHosting customers exclusively at no additional charge.

CirtexHosting offers a variety of [Unmetered Bandwidth hosting](#) plans and Semi-Dedicated hosting plans, in addition to Shared hosting and Reseller hosting plans. With Unmetered Bandwidth Hosting, customers can host bandwidth-intensive applications and stream multimedia without worrying about exceeding arbitrary caps or facing crippling overage fees. Unmetered Bandwidth hosting plans start at just \$15.99 per month. Semi-Dedicated hosting plans start at just \$35.99 per month and are housed on powerful servers that can deliver the level of system resources needed to sustain optimal performance for each individual account.
